

Adaptive Vision studio

www.adaptive-vision.com

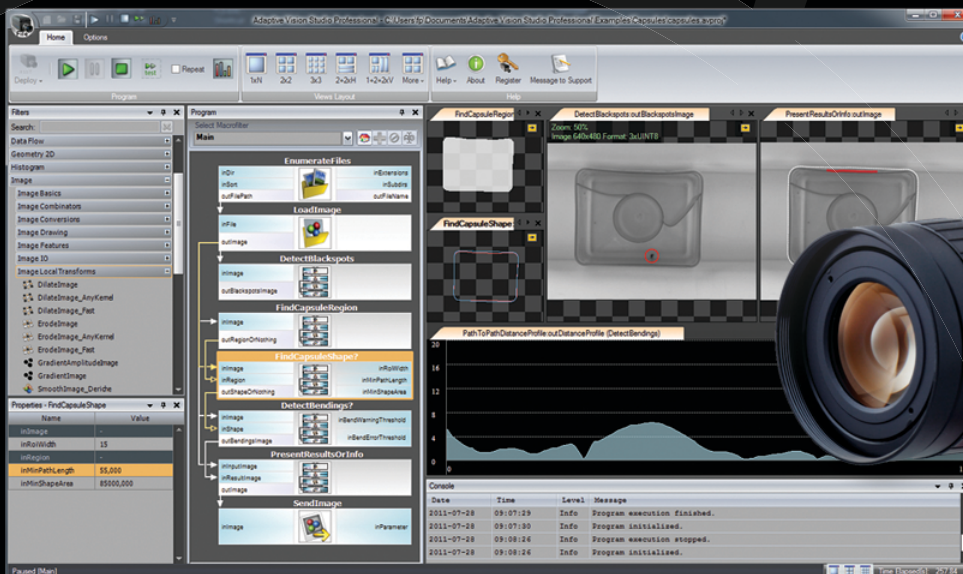

Adaptive Vision provides you with high quality **software for machine vision** together with **extensive support** in creating machine vision applications.

Adaptive Vision Studio

Our flagship product Adaptive Vision Studio 2.2 makes it possible to create the most powerful vision algorithms in a purely point & click environment. It is easy to use, highly interactive and still able to solve even the most challenging quality inspection tasks - a tool of choice for rapid prototyping and fast machine vision integration

C++ Libraries

For OEMs and experienced C++ programmers the same power and flexibility is available in a form of carefully designed and highly optimized C++ libraries. There are hundreds of functions for image acquisition, image processing, blob analysis, contour analysis and measurements. Our implementations are also one of the fastest in the world.

The Company

Our mission is to create new software products for entire industrial machine vision. What distinguishes us from other companies in this market is a strong believe that a good user experience is one of the most important ingredients of an innovative software. Thus, the products we develop are not only powerful, but also intuitive and adaptable. Our goal is to make things that people love.
